DIGITAL LITERACY

PROJECT REPORT

NAME: Diksha Dutta

Reg No.: 25MIM10021

Branch: Integrated MTECH IN AI

Course Code: CSE0001

Date: 26 March 2026

INTRODUCTION

This project focuses on developing essential digital literacy skills required in today's technology-driven world. As a Student Digital Ambassador, the main aim of this project is to create awareness among peers about the responsible and effective use of digital tools and platforms.

The project is split into various modules, and each module deals with a crucial part of digital literacy. These include the knowledge of digital concepts, the development of a professional online profile, coding and collaboration through online platforms, the knowledge of appropriate email behavior, and the knowledge of cybercrimes and online safety. Through the accomplishment of these tasks, experience is gained through platforms such as GitHub, LinkedIn, Kaggle, HackerRank, and Google Forms.

Overall, this project helped in improving technical knowledge, communication skills, and awareness of safe digital practices. It also highlighted the importance of being responsible, careful, and professional while interacting in the digital environment.

TASK 1

Which tool I used:

In order to fulfill this assignment I have created a digital literacy awareness infographic using Canva design tools. My purpose was to make the concept of digital literacy ,easy to understand for students in a creative way. The infographic is titled "Digital Literacy: Be Smart Online," and it has different sections that explain what digital literacy is, why it is important what are the risks involved and what habits we need to follow while using digital media.

What my design shows:

Through the design I defined digital literacy as the “ability to use digital devices and online resources in a responsible and effective way.” I also emphasized the significance of digital literacy in people’s daily lives, such as “identifying false information safeguarding personal information and leveraging technology for learning.” The infographic also emphasizes the various risks of digital literacy such as online scams, cyberbullying, and the negative effects of excessive digital device use and I also added a section on smart habits, such as the importance of developing strong passwords and thinking before sharing anything online.

One thing I found difficult or interesting while making it:

One difficulty I faced was arranging all the information in a limited space while keeping the design neat and easy to read. However, this process helped me improve my presentation and creative skills. Overall, it was a meaningful and enjoyable experience.

DIGITAL LITERACY: BE SMART ONLINE

Digital literacy is the ability to use digital devices like smartphones, computers, and the internet effectively. It involves understanding how to find, evaluate, and use online information correctly. It also means knowing how to communicate responsibly and safely in the digital world.

WHY IT MATTERS?

Digital literacy is important because it helps people identify fake news and avoid misinformation. It keeps personal information safe and allows students to learn better using online resources. It is also essential for future careers, as most jobs today require basic digital skills.

RISKS

Without digital literacy, people may fall victim to online scams, cyberbullying, and data theft. They might unknowingly share personal information or believe false information. Excessive use of digital devices can also lead to addiction and negatively affect health and productivity.

SMART HABITS

Practicing good digital habits is important for staying safe online. This includes using strong passwords, avoiding sharing personal details, and thinking carefully before posting or sharing content. Being respectful and responsible while communicating online also helps create a positive digital environment

TASK 2

I created my digital portfolio using three platforms: GitHub, LinkedIn, and Kaggle. These platforms help in building a strong professional presence and showcasing skills in different ways.

GITHUB:

Mostly people use GitHub for sharing coding projects and tracking coding work and I have created a profile README to briefly introduce myself and plan to upload my assignments and projects regularly on GitHub, This will help me keep a record of what I have learned and show how much I have progressed in terms of coding over time.

LINKEDIN:

One of the networking sites is LinkedIn. This is a professional network site where I have provided my educational details and basic information. This will help me in network with other professionals, search for internships and learn the latest trends. In addition I will keep my profile updated with my achievements and skills.

KAGGLE:

Kaggle is a platform for data science and working with datasets. I created my account on this platform to explore the datasets and improve my analytical thinking skills. In the future, I plan to use these platforms to improve my skills and create a good portfolio for future opportunities.

In the next four years I plan to make good use of all these platforms to improve my skills and create a good portfolio for future opportunities.

TASK 3

For this task, I explored coding and collaboration platforms by using HackerRank and Google Forms. These tools helped me understand how to practice coding and create interactive content for others.

I have an account on this platform and I have solved a beginner level problem on this platform. This platform is helpful for improving programming skills and logical reasoning capabilities. This platform has various problems and one can learn how to code by solving problems on this platform step by step. I will practice on this platform again to enhance my skills further.

For collaboration, I have used Google Forms to create a Digital Literacy Awareness Quiz. And the Google Form had questions in the format of multiple-choice and short answer questions. This will test my basic knowledge of digital literacy.

This tool is useful in the future to perform various activities in the context of academics. This tool is useful in the context of academic development by enhancing coding skills and developing interactive content for academic development.

TASK 4

A situation where there is a likelihood of having problems due to poor digital communication is when a student writes an email to the professor requesting an extension of time to complete the assignment without observing proper etiquette in their email. For instance when the student fails to include the subject in the email, or when the student fails to communicate properly by not using the word “Hey” in the email or when the student fails to communicate the purpose of the email clearly to the professor then there is a likelihood of having problems.

This situation could have been handled more effectively by following proper communication skills so The student has to ensure that there is a proper subject line a greeting at the beginning of the message, and a well-structured message explaining the situation politely and It is also essential to maintain a formal tone while writing the message and ensure that the message is clear.

This is a clear case of the significance of digital communication skills. Proper communication skills ensure that there are no misunderstandings and also leave a good impression.

TASK 5

During the process of completing this task, I was surprised by the fact that people can easily become victims of cyber crimes. In the case of fraud related to UPI payments, people are tricked by small schemes such as calls and messages. They end up giving out their information unknowingly. It was also understood that people are not aware of the details of the scams.

This has also enabled me to understand the importance of being cautious while transacting using digital payment systems. One of the habits that I am going to adopt is to be cautious while checking the request or link before proceeding with the transaction. I am also not going to trust any unknown calls or messages for transacting purposes.

Overall, this activity increased my awareness about online safety and the need for responsible digital behavior.

CONCLUSION

This project gave me a general knowledge of digital literacy and its significance in the modern digital age. Through the various tasks involved in this project I learned to understand various aspects of digital literacy such as the creation of informative content and having a professional digital presence, and utilizing digital platforms for learning and collaborating, as well as the right etiquette for communication. I also learned of cybercrime and the need for safety measures to be taken while using the internet.

This project has helped me develop my technical, creative and communication skills and It has also made me a responsible and cautious person while dealing with digital tools and platforms. I learned how to effectively communicate information and how to remain professional while dealing with digital platforms.

Overall, this project was a valuable learning experience that enhanced my confidence and prepared me to use

digital technology in a more safe, efficient, and responsible manner in the future.
