DIGITAL LITERACY

PROJECT REPORT

NAME: Diksha Dutta

Reg No.: 25MIM10021

Branch: Integrated MTECH IN AI

Course Code: CSE0001

Date: 26 March 2026

INTRODUCTION

This project focuses on developing essential digital literacy skills required in today's technology-driven world. As a Student Digital Ambassador, the main aim of this project is to create awareness among peers about the responsible and effective use of digital tools and platforms.

The project is divided into multiple modules, each covering an important aspect of digital literacy. These include understanding basic digital concepts, creating a professional online presence, practicing coding and collaboration using online platforms, learning proper email etiquette, and gaining awareness about cybercrime and online safety. Through these tasks, practical experience was gained using platforms such as GitHub, LinkedIn, Kaggle, HackerRank, and Google Forms.

Overall, this project helped in improving technical knowledge, communication skills, and awareness of safe digital practices. It also highlighted the importance of being responsible, careful, and professional while interacting in the digital environment.

TASK 1

Which tool I used:

For this task, I designed a digital literacy awareness infographic using Canva. My aim was to present the concept of digital literacy in a clear and visually engaging way for students. The infographic is titled “Digital Literacy: Be Smart Online” and is divided into sections that explain what digital literacy is, why it is important, the risks involved, and the habits we should follow while using digital platforms.

What my design shows:

Through my design, I described digital literacy as the ability to use digital devices and online resources responsibly and effectively. I also focused on its importance in everyday life, such as helping people recognize false information, protect their personal data, and use technology for learning. The infographic further highlights common risks like online scams, cyberbullying, and overuse of digital devices. In addition, I included a section on smart habits, encouraging safe practices like creating strong passwords and thinking carefully before sharing anything online.

One thing I found difficult or interesting while making it:

One difficulty I faced was arranging all the information in a limited space while keeping the design neat and easy to read. However, this process helped me improve my presentation and creative skills. Overall, it was a meaningful and enjoyable experience.

DIGITAL LITERACY: BE SMART ONLINE

Digital literacy is the ability to use digital devices like smartphones, computers, and the internet effectively. It involves understanding how to find, evaluate, and use online information correctly. It also means knowing how to communicate responsibly and safely in the digital world.

WHY IT MATTERS?

Digital literacy is important because it helps people identify fake news and avoid misinformation. It keeps personal information safe and allows students to learn better using online resources. It is also essential for future careers, as most jobs today require basic digital skills.

RISKS

Without digital literacy, people may fall victim to online scams, cyberbullying, and data theft. They might unknowingly share personal information or believe false information. Excessive use of digital devices can also lead to addiction and negatively affect health and productivity.

SMART HABITS

Practicing good digital habits is important for staying safe online. This includes using strong passwords, avoiding sharing personal details, and thinking carefully before posting or sharing content. Being respectful and responsible while communicating online also helps create a positive digital environment

TASK 2

I created my digital portfolio using three platforms: GitHub, LinkedIn, and Kaggle. These platforms help in building a strong professional presence and showcasing skills in different ways.

GITHUB:

GitHub is mainly used for sharing coding projects and tracking development work. I created a profile README to introduce myself and plan to upload my assignments and projects there regularly. It will help me maintain a record of my learning and demonstrate my technical growth over time.

LINKEDIN:

LinkedIn is a professional networking platform where I added my educational details and basic profile information. It will help me connect with professionals, explore internship opportunities, and stay updated with industry trends. I plan to keep updating my profile with my achievements and skills.

KAGGLE:

Kaggle is a platform focused on data science and working with datasets. I created my profile to explore datasets and improve my analytical thinking. In the future, I aim to practice more and learn from real-world data to strengthen my understanding.

Over the next four years, I plan to actively use all these platforms to improve my skills and build a strong portfolio for future career opportunities.

TASK 3

For this task, I explored coding and collaboration platforms by using HackerRank and Google Forms. These tools helped me understand how to practice coding and create interactive content for others.

On HackerRank, I created an account and completed a beginner-level problem. This platform is useful for improving programming skills and logical thinking. It provides various challenges that help in learning coding step by step. I plan to continue practicing on HackerRank to strengthen my problem-solving abilities.

For collaboration, I used Google Forms to create a Digital Literacy Awareness Quiz. The form included both multiple-choice and short-answer questions to test basic understanding of digital literacy. This tool is helpful for collecting responses and analyzing them through Google Sheets. It can be used for surveys, quizzes, and academic purposes.

These platforms will support my academic growth by improving my coding skills and helping me create interactive learning content. I plan to use them regularly in the future to enhance my knowledge and productivity

TASK 4

A situation where poor digital communication can lead to problems is when a student sends an email to a professor requesting an extension without following proper email etiquette. For example, if the student writes a message without a subject line, uses an informal tone like “Hey,” or does not clearly explain the reason for the request, the email may appear unprofessional. As a result, the professor might misunderstand the request, delay the response, or even ignore the email completely.

This situation could have been handled more effectively by using proper communication practices. The student should include a clear and relevant subject line, begin with a respectful greeting, and write a well-structured message explaining the situation politely. It is also important to maintain a formal tone and check the message for clarity before sending it.

This example highlights the importance of good digital communication skills. Clear, polite, and professional communication helps avoid misunderstandings and creates a positive impression in both academic and professional environments.

TASK 5

While working on this task, I was most surprised by how easily people can become victims of cybercrime, especially in cases of UPI payment fraud. Simple tricks like fake calls, messages, or payment requests can mislead users into sharing sensitive information or approving transactions without realizing the consequences. I realized that many people are not fully aware of how these scams work, which makes them more vulnerable.

This task helped me understand the importance of being cautious while using digital payment platforms. One habit I will personally change is carefully verifying any payment request or link before taking action. I will also make sure not to trust unknown calls or messages related to financial transactions.

Overall, this activity increased my awareness about online safety and the need for responsible digital behavior.

CONCLUSION

This project provided a comprehensive understanding of digital literacy and its importance in today's digital world. Through the different tasks, I was able to explore various aspects such as creating informative content, building a professional digital presence, using online platforms for learning and collaboration, and understanding proper communication etiquette. I also gained awareness about cybercrime and the precautions required to stay safe online.

Working on this project helped me improve my technical, creative, and communication skills. It also made me more responsible and cautious while using digital tools and platforms. I learned how to present information effectively and maintain professionalism in online interactions.

Overall, this project was a valuable learning experience that enhanced my confidence and prepared me to use digital technology in a more safe, efficient, and responsible manner in the future.
